

ABSTRACT

Methods and systems are provided for increasing the participation of contributors of charities and/or other non-profits. In one illustrative embodiment, the contributors are allowed to track the location of goods and/or services assigned to their donation to an ultimate destination. In one example, the organization receives a donation from a contributor, and assigns the donation to a delivery lot of cash, goods and/or services. Once the delivery lot is assembled and shipped, the location of the delivery lot is obtained at one or more points in time, such as at selected ports of call, at the end of each shipping leg, or at any other intermediate or end point along the distribution path. The location information for the delivery lot is then passed on to the contributor.
